Kentucky House Health & Family Services Chair Representative
Addia Wuchner

cc: House Health & Family Services Committee Members,
Co-Sponsors of HB 191

Dear Chairwoman Wuchner,

Our coalition, Americans for Vision Care Innovation, would like to flag a very important issue for consumers and taxpayers that is currently before your committee; the right to get prescriptions for contact lenses and glasses renewed online.

Your committee is scheduled to hold a hearing on HB 191 in the coming days that would severely restrict the rights of consumers to get an online prescription renewal for glasses or contacts in Kentucky. We have deep concerns about this bill and would urge you to slow down the process and gather some more information about the possible impact of this bill before proceeding. We have outlined some important information for you below and stand ready to provide more information at your earliest convenience.

Kentucky is known across the country as a leader when it comes to protecting and strengthening consumer and patient rights and promoting cost savings in the healthcare system. Your current laws allow for the use of telemedicine for online vision tests and prescription renewals. More than 40 million Americans wear contact lenses and millions more wear glasses.

Americans for Vision Care Innovation is a bipartisan coalition of taxpayer advocates, consumer groups, think tanks and innovative companies, working with leading eye doctors, who have joined together to ensure consumers across the country have access to the latest cost-saving and time-saving eye care technologies. The companies that have joined our coalition compete against each other in the marketplace, but are united in support of the use of telemedicine for vision care and online prescription renewal.

Our mission is simple. We want to give voice to millions of consumers and taxpayers who deserve the benefits of safe new vision care telemedicine technologies that will make their lives easier and healthier. We seek to inform legislators, local community leaders and the broader public
about how online vision tests can improve access to eye care for eligible consumers. We also want
to dispel the myths about online vision tests that are being spread in a troubling misinformation
campaign by those who stand to financially gain from outlawing these services.

Disturbingly, the American Optometric Association (AOA), the lobbying group representing
optometrists, and some contact lens manufacturers have been mounting a massive campaign to
ban these new technologies state by state. We have heard many reports from across the country
that legislators have been given incorrect information about the use of telemedicine for vision care
and online prescription renewal services; and we think it is important for you to consider all the
aspects of this issue before acting.

Here are some of the key facts you should know:

• First, consumers must have a prescription from an eye doctor in order to use these services
  initially. **These new, online technologies are designed to help get prescriptions renewed,**
  **not to replace comprehensive eye exams.** For millions of Americans, their prescription
  changes very little between the ages of 18-50, so they shouldn't be forced to rearrange their
  work schedule, travel – sometimes for hours for those in rural areas - and pay for expensive
  comprehensive exams every time they simply want their prescriptions checked. The American
  Academy of Ophthalmologists, the world's largest association of eye physicians and surgeons,
  recommends that healthy adults under the age of 40 receive an in-person eye exam every 5 to
  10 years; among older patients, the recommended interval is 4 years or less. This means that for
  many of your constituents, there is no need to return to a provider's office on an annual basis
  simply to renew a contact lens prescription.

• Second, **these new services are easy to use and are available 24 hours a day.** Your
  constituents no longer have to rush across town or take off work to get a prescription renewed –
  or worse, travel for hours if they live in a community with no eye doctors. These services are also
  generally far less expensive for consumers than visiting an eye care provider in person.

• Third, customers who use these services go through eye health screenings as part of the process
  and their online prescription **renewals are reviewed and approved by ophthalmologists**
  **and optometrists,** who are specifically licensed to practice in the state where the exam occurs.

• Fourth, **using online prescription renewal services can lead to improvements in eye
  health.** Medical research shows that stretching one's contact lenses beyond the manufacturer-
  recommended wear schedule is one of the leading causes of eye infections. Giving consumers
  the option of renewing their prescriptions online through licensed eye care providers can
  help reduce this risk and the tendency of many consumers to wait too long before renewal. In
  addition, customers who don't qualify for using the service for health reasons are prompted
  to go in person to their eye care provider, leading to an increase in consumers obtaining such
  exams on a timely basis.

• Fifth, **ophthalmologists and other members of the medical community generally oppose
  bans on the use of telemedicine for vision care and online vision tests.** They believe
  these new technologies can be used safely when doctors have oversight and banning them
  could severely jeopardize the development of vision saving and lifesaving technologies to treat
diseases like diabetes. In fact, the federal government is currently running an ocular telehealth
  demonstration project in the Indian Health Service to monitor and treat diabetes patients
  supported by both ophthalmologists and optometrists.
And finally, **these technologies have the potential to save taxpayers millions of dollars.** State and federal governments pay millions of dollars each year for eye care services for their employees and those who receive medical benefits from their programs. Allowing these plans to utilize telemedicine for contact lens and glasses prescription renewals could result in big savings for taxpayers. And in the future, as State Medicaid programs evaluate vision care options, proper policies toward telemedicine for vision care could deliver greater value both to participants and taxpayers.

We strongly believe that legislators who have all the facts about online prescription renewals and online vision checks will make the right choice for their constituents and will allow these important technologies to continue to operate in Kentucky.

Kentucky’s contact lens users are entitled to the greatest possible degree of choice and convenience in the way they renew their lens prescriptions – and at the lowest possible prices.

The passage of HB 191 in Kentucky will result in less choice, higher costs and more inconvenience for Kentucky consumers and could drive up vision care costs across the state. We encourage you to oppose HB 191 and convene all the stakeholders in the near future to discuss a consensus approach moving forward.

We are more than happy to speak with you and your staff in more detail at any time if you have questions about online prescription renewal or the information we present in this letter. Please contact us with any questions.

Thank you for your time and consideration.
